

Amendments to the Drawings

A replacement drawing for Figure 1 is submitted with this amendment. No new matter is in the replacement drawing. The only change to the replacement drawing compared to the original drawing is that the direct current power source 104 has been moved behind the room wall 132 to more clearly show how the power source 104 can be remotely located so that it is RF shielded. Remotely locating the power source 104 to provide for RF shielding is described in the specification and, therefore, this modification to the drawing does not introduce any new matter into the application.

Figures 2 and 3 are added with this amendment. Figures 2 and 3 do not add any new matter to the application. Rather, Figures 2 and 3 more clearly show the claim limitations that are already present in the application, such as a non-hung grid ceiling and the predetermined rectangular ceiling tile frame that is a component of a fixture disposed below the non-hung grid ceiling.
